---

The Contractor, Scott Cartwright (?) got a hold of Chris Piehler, they are going to meet for a demonstration tomorrow and then go from there.

And then as I was writing that line, Chris called me. We agreed on what the proper application of Oil Gator should be. And we agreed about their role and EPA's role. It may still result in an RRT call.

If it was me, I would recommend the use of a product like Oil Gator. Limited to the margins of the spill. Where it was too dangerous, destructive, or unproductive to use mechanical recovery.

I also think that Chris and Scott will come to some agreement about using it and will want an RRT call and consent..
